1.7 Environmental Assessment — Claim for Categorical Exclusion

In accordance with 21 CFR § 25.31(a), the Applicant claims categorical exclusion from the requirements for preparation of an Environmental Assessment (EA) under the National Environmental Policy Act (NEPA) for this NDA submission.

Basis for Categorical Exclusion

The action qualifies for categorical exclusion under 21 CFR § 25.31(b) because the drug product, nexivarin hydrochloride, when used as labeled, will not significantly affect the quality of the human environment. The following criteria are met:

Criterion	Status	Justification
Manufacture of <100,000 kg/year	Compliant	Annual production estimated at 2,400 kg API
No extraordinary circumstances	Confirmed	Standard small-molecule pharmaceutical; no genotoxic degradants
No impact on endangered species	Confirmed	No manufacturing sites in ecologically sensitive areas
No significant waste streams	Confirmed	Waste disposal in compliance with all federal and state regulations
No clinical significance at environmental concentrations	Compliant	Environmental concentration (EIC) estimated < 1 ng/L, well below PNEC

Environmental Fate Data

Predicted environmental concentration (PEC) calculations per EMEA guidelines confirm that nexivarin is not expected to accumulate in the aquatic environment. The drug is rapidly metabolized to inactive metabolites and does not bioaccumulate.

The Applicant certifies that, to the best of its knowledge, this action qualifies for categorical exclusion and extraordinary circumstances do not exist that would preclude this exclusion per 21 CFR § 25.31(b).
